GE HealthCare

Venue Sprint
ultrasound systems

Sets the pace

Get ahead with highly portable ultrasound. Bringing flexibility to everywhere you care.

Venue Sprint™ gives you the uncompromised image quality and smart workflow of Venue™ family systems along with the freedom and maximum portability of wireless probes. This all-in-one, entry-level solution combines wireless connectivity with a small, streamlined console. Features Venue family software, to give you access to the AI tools you need, to simplify advanced exams whenever and wherever care is needed.

Wireless probe capability

Take handheld to different clinical spaces. Sync up and you're ready to go. Without wires you're not tethered to a system or a space.

Built-in charger

Charge on the go.

Small yet powerful

Flexible, wireless dual-probes deliver clear images.

Easy to clean

Smooth and seamless surfaces support infection control efforts.

Reliable support

Venue Sprint is backed by a multi-year warranty.[1]

Maximum portability

Can be used in offices, clinical areas, hospitals, home environments or air/road ambulances.

Compatible with Vscan Air™ transducers

Dual-probe imaging power—complete shallow and deep scans without switching probes or compromising image quality. The curved array wireless probe is designed for abdominal imaging and obstetrical assessments. The linear array probe is suited for vascular, MSK, lung (and more!) applications. The sector phased array probe is excellent for rapid cardiac assessments.

Explore available transducers

Let’s simplify the complex

Venue Sprint ultrasound systems are built specifically for point of care medicine wherever care is needed. By streamlining workflow, they help users of different experience levels confidently conduct patient exams.

AI-enabled tools support your confident decision-making

AI-resources based on synthesized data and proprietary algorithms simplify manual processes such as measuring and finding B-lines, helping drive consistency from user to user.

Documentation tools streamline exams

Protocol management and easy documentation tools help users conquer busywork by readily providing the information they need, reducing the need to manually type findings.

Probe compatibility

Venue Sprint is compatible with Vscan Air probes for exceptional image quality with a multitude of exams. The probes also include a control button.

A common platform ensures a consistent experience

All systems are built on one platform with the same interface to ensure familiarity and simplify training across your facility.

Built-in teaching assistance facilitates learning

Scribble assists training with a touch-operated pointer and free-drawing capabilities that can also be visible on an external monitor or shared screen.

Venue Coach MSK provides reference images to guide novice users in scanning the correct anatomy and makes documentation easy.

Caption Guidance™ helps even new users capture diagnostic-quality images with its built-in AI-driven software.

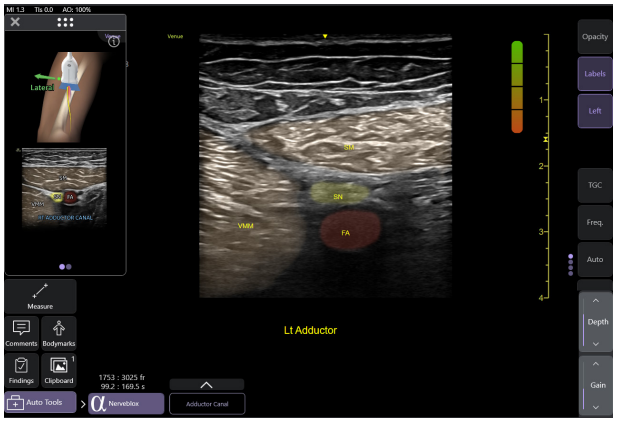
Touch, pinch, swipe

No buttons. No knobs. A familiar touch screen with a simple, clear and intuitive interface works even with gloves or screen covers.

Innovations designed to enhance clinical accuracy and efficiency

Leveraging data and proprietary algorithms, Venue family systems include our latest AI-based tools and clinical support advancements to help increase exam efficiency and user consistency.

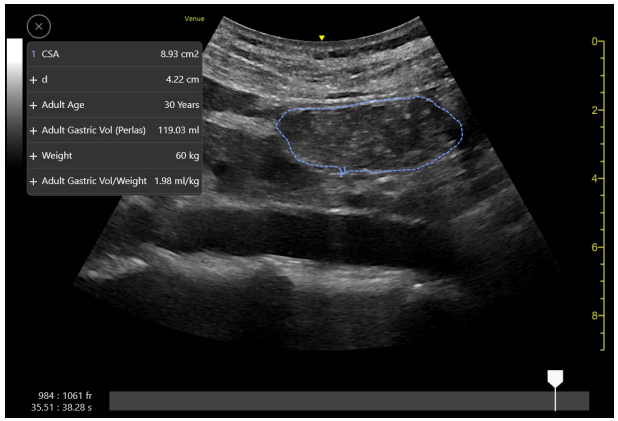
Nerveblox™



Confidently perform ultrasound-guided peripheral nerve blocks with Nerveblox.

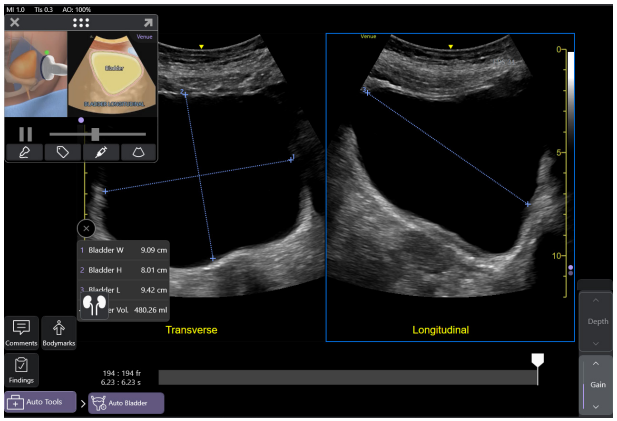
This AI-enabled tool automatically labels key anatomical landmarks in the ultrasound image, helping clinicians feel confident during the procedure and streamlining the workflow with the goal of reducing procedure time.

Gastric Measurement



This easy-to-use decision support and measurement tool helps you to calculate the gastric cross-sectional area, volume and the volume-to-weight ratio.

Auto Bladder Volume



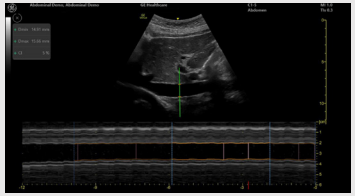
This AI-enabled tool provides rapid and easy urinary bladder volume measurements, saving clinicians valuable time and enhancing clinical accuracy. It measures bladder dimensions and calculates the bladder volume from two views: transverse and longitudinal.

- 90% success rate[7] with user accepting the automatic caliper placement nine out of 10 times
- Reduced exam clicks from 18 clicks to five[8] dramatically improving workflow

Helping you work smarter, not harder, with AI-proven tools

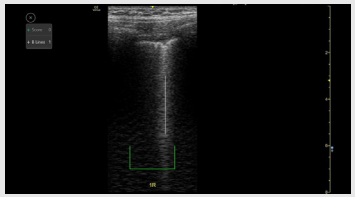
Real-time EF

Enables continuous calculation of real-time ejection fraction without having to conduct an ECG. Capture instant, precise results—within +/- 10 percent points of experts in 86% of cases.[2]



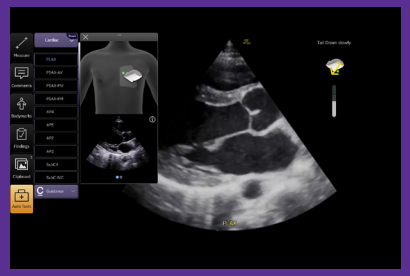
Auto IVC

Measure IVC collapsibility or distensibility accurately and automatically. **Equivalent to an expert user's ability 87% of the time.**[3]



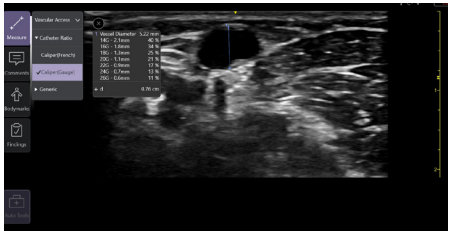
Auto B-lines

Calculate overall lung score in one step. You can also use it with Lung Sweep to highlight B-lines and display the frame with the most B-lines per rib space. **As highly reliable as visual counting.**[4]



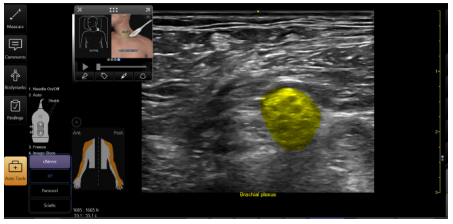
Caption Guidance

Real-time, turn-by-turn, on-screen guidance helps new point of care ultrasound (POCUS) users capture diagnostic-quality cardiac images. It uses AI to guide probe placement, offering reference images and a quality meter to indicate image clarity. Also allows users to select the best available image loop from continuous recording and save your clip hands-free when the quality threshold is reached. Use Real-time EF and Auto VTI capabilities with your captured views.



Catheter to Vessel Ratio

Supports you in selecting the appropriate size catheter based on vessel diameter.



cNerve

During the scouting phase, use cNerve to identify the nerve landmark and see it highlighted on the image. Helps detect and track the nerve in 99% of cases while scanning or reviewing a stored clip.[5] Available in certain regions.

Move through exams quickly and confidently with workflow tools

Everyone is looking to eliminate administrative tasks at the point of care, and that's what Venue family systems do. Easy documentation and protocol management tools reduce keystrokes, facilitate exam comparison and streamline image organization for efficient review.

Real-time documentation

Lung Diagram

A single-view diagram of anatomical lung segments with one-click image storing. Enables calculation of an overall Lung Ultrasound Score to help response to therapy.

eFAST Diagram

Allows you to assess and document patient status, from internal bleeding to pneumothorax, with up to 80% reduction in keystrokes[6]

Renal Diagram

Simplifies hydronephrosis documentation and follow-up. Minimizes typing with labeling tools.

Venue MSK Coach

This easy-to-use exam documentation tool assists you through exams by providing reference images and anatomy markups.

Multiple anatomical areas and helpful video tutorials help clinicians to acquire the scans they need. Focus areas include:

- Shoulder
- Knee
- Hip
- Elbow
- Wrist/Hand
- Ankle/Foot

Scribble

Assists training with a touch-operated pointer and free-drawing capabilities.

Verisound digital solutions get clinicians there.

Verisound™ solutions reduce the documentation burden for clinicians using POCUS through a portfolio of connectivity, collaboration and productivity tools. You can maintain a comprehensive, accessible patient history across the enterprise, collaborate with colleagues and manage the fleet remotely.

Now everywhere is point of care*

With the portability and mobility to go anywhere, you can get ahead with Venue Sprint. Take handheld ultrasound to different clinical spaces, sync up and be ready to go.

Venue Sprint supports a wide range of environments including:

Critical Care

Enables on-the-spot visual confirmation, aiding the team in decision-making and collaboration on complex cases.

Learn more

Emergency Medicine

Enables assessments for a variety of anatomy all with a single device. Supports deep and shallow scanning with seamless data connectivity.

Learn more

Musculoskeletal

A curved array on one side and linear array on the other of the dual wireless probe enables clear assessment of deep and shallow anatomy without switching probes.

Learn more

Vascular Access

Helps you to assess vascular diseases, from cardiovascular conditions and peripheral vascular disease to pulmonary vascular disease.

Medical Transport

The ultimate in portability, the wireless nature gives you the freedom to assess patients in the most critical of spaces.

Aesthetics

Great for superficial Color flow imaging, face, neck and nail and other ultrasound scans used in aesthetic procedures.

About GE HealthCare Technologies Inc.

GE HealthCare is a trusted partner and leading global healthcare solutions provider, innovating medical technology, pharmaceutical diagnostics, and integrated, cloud-first AI-enabled solutions, services and data analytics. We aim to make hospitals and health systems more efficient, clinicians more effective, therapies more precise, and patients healthier and happier. Serving patients and providers for more than 125 years, GE HealthCare is advancing personalized, connected and compassionate care, while simplifying the patient's journey across care pathways. Together, our Imaging, Advanced Visualization Solutions, Patient Care Solutions and Pharmaceutical Diagnostics businesses help improve patient care from screening and diagnosis to therapy and monitoring. We are a $19.7 billion business with approximately 53,000 colleagues working to create a world where healthcare has no limits.
